

External references published

Summary:

This document constitutes an evolutionary inventory of the external references published developing Code_aster on applications representative of industrial files. Those are gathered by **features**.

It takes again same classification as the document [R0,00,01].

1 Algorithms and methodologies

1.1 Modal analysis

1.2 Transitory dynamic analysis

P. Massin, H. Andriambololona, D. Bosselut, Methodology for have numerical simulation of year gold insertion has drop of the rod cluster control assembly in has PWR, Nuclear Engineering and Design, 237 (2007), pp.600-606.

1.3 Frequential dynamic analysis

1.4 Spectral analysis and random answer

I. Zentner. Use of RVT for the Computation of In-Structure Answer Spectra and Peak Answers and Comparison to Time History And Answer Spectrum Analysis. Earthquake Spectra, Jul 13.2018. <https://doi.org/10.1193/051417EQS090M>.

1.5 dynamic Under-structuring

1.6 Extrapolation of experimental measurements

1.7 Interaction ground-structure

Greffet, NR., Obrembski, CH., Clouteau, D. efficient New numerical method for not linear seismic IF simulation. Int. Conf. one Computational Methods for Coupled Problems in Science and Engineering. COUPLED PROBLEMS 2005. Mr. Papadrakakis, E. Oñate and B. Schrefler (Eds).

Fayolle, Integrating logarithmic-strain based hyperelastic into formulation has three-field mixed finite elemnt formulation to deal with incompressibility in finite-strain elastoplasticity. Finite Elements in Analysis and Design. Volume 86, September 2014, pp. 61-70.

1.18 Buckling

1.19 Thermics

1.20 Interaction fluid-structure

1.21 Limiting analysis

François Voltaire. Regularised Limit Analysis and Applications to the Load Carrying Capacities of Mechanical Components, 2000-09-11, European Congress on Computational Methods (ECCOMAS 2000), Barcelona.

François Voltaire. Chapter in Book: Limit analysis by the Norton-Hoff-Friaâ regularising method. Numerical Methods for Limit and Shakedown Analysis. Deterministic and Probabilistic Problems. Edited by M.Heitzer and M.Staat. NIC Series, Volume 15, ISBN: 3-00-010001-6, John von Neumann Institute for Computing Publishers, 2003.

1.22 Estimators of error

1.23 Tool-trades

2 Laws of behavior

2.1 Discrete elements and of beams

2.2 Thermoelasticity

2.3 Incremental elastoplasticity

Thomas Helfer, Jean-Michel Proix, Olivier Fandeur. Establishment of laws of mechanical behavior using MFront: simplicity, effectiveness, robustness and portability. 12^{ème} National conference in calculation of the structures, May 2015, Giens, France.

2.4 Elastoviscoplasticity under irradiation

2.5 Behavior of polycrystalline metals

2.6 Géo-materials and porous environments

Ioanna Rapti, Arézou Modaressi-Farahmand Razavi, Alexandre Foucault, Fernando Lopez-Caballero, François Voldoire. Coupled S-P wave propagation in nonlinear regularized micromorphic media. Computers and Geotechnics, Elsevier, 2016.77 (1), pp.106 – 114.

Rita Riedlbeck, Daniele Di Pietro, Alexandre Ern, Sylvie Granet, Kyrylo Kazymyrenko. Stress and flow reconstruction in Biot' S poro-elasticity problem with to application a posteriori error analysis. Computers and Mathematics with Applications, Elsevier, 2017.73 (7), pp.1593-1610.

Ioanna Rapti, Fernando Lopez-Caballero, Arézou Modaressi-Farahmand Razavi, Alexandre Foucault, François Voldoire. Liquefaction analysis and ramming evaluation of structures embankment-type. Recorded Geotechnica, Springer Verlag, 13, February 2018, DOI [10.1007/s11440-018-0631-z](https://doi.org/10.1007/s11440-018-0631-z).

2.7 Behavior of the concretes

P. Badel, V. Godard, J. - B. Leblond, Application of nap anisotropic ramming model to the prediction of the failure of nap complex industrial concrete structure, International Newspaper of Solids and Structures, Vol.44, Issues 18-19, pp.5848-5874, 2007.

2.8 Behavior of the reinforced concrete

D.Markovic, P.Koechlin, F.Voldoire. Concrete Reinforced structures under extreme loading: Stress resulting Total Reinforced Concrete Models (GLRC). CompDyn, Rethymno, Crete, Greece, 13-16 June 2007.

Ch.Combescure, H.Dumontet, F. Voldoire. Dissipative Homogenised Reinforced Concrete (DHRC) constitutive model dedicated to reinforced concrete piers under seismic loading. International Newspaper of Solids and Structures, Volume 73-74, November 2015, Pages 78-98. <https://hal.inria.fr/hal-01634203>. DOI: [10.1016/j.ijsolstr.2015.07.007](https://doi.org/10.1016/j.ijsolstr.2015.07.007).

2.9 Behavior of the reinforcements in the reinforced concrete structures

2.10 Damage

P. Badel, V. Godard, J. - B. Leblond, Application of nap anisotropic ramming model to the prediction of the failure of nap complex industrial concrete structure, International Newspaper of Solids and Structures, Vol.44, Issues 18-19, pp.5848-5874, 2007.

E. Lorentz, V. Godard, Gradient ramming models: toward full-scale computations, Comput. Meth. Appl. Mech. Engrg. 200, pp. 1927-1944, 2011.

2.11 Metallurgical models

F. Waeckel, P. Dupas, S. Andrieux. In Thermo-Metallurgical Model for Steel Cooling Behaviour: Proposal, Validation and Comparison with the Sysweld' S Model. Newspaper of Physics IV, Volume 6, January 1996.

2.12 Viscoelasticity

2.13 Elastoviscoplasticity of metals

E. Lorentz, J. Besson, V. Cano, Numerical simulation of ductile fracture: efficient year and robust constitutive implementation of the Rousselier law, Methods Computer in Applied Mechanics and Engineering, 197, pp. 1965-1982, 2008.

Zhang Y, Lorentz E, Besson J. Ductile ramming modelling with locking - free regularised GTN model. Int J Numer Methods Eng., vol. 113, pp.1871-1903, 2013. <https://doi.org/10.1002/nme.5722>

2.14 Lhear cohesive and joints

E. Lorentz, S. Cuvilliez, K. Kazymyrenko, Convergence of have gradient ramming model toward has cohesive zone model, Mechanical CR 339, pp. 20-26, 2011.

E. Lorentz, S. Cuvilliez, K. Kazymyrenko, broad Modelling ace propagation: from gradient ramming to cohesive zone models, Int. J. Fracture, vol. 178, n°1-2, pp. 85-95, 2012.
