SSLP200 - Linear mechanics D_PLAN

Summary:

This test is a test of not-regression. It does not have an analytical solution. The objective is to test a large number of different elementary calculations:

• tally: linear mechanics (MECA_STATIQUE)
• very varied loadings (in form "reality" or "function")
• all possible types of meshes (linear/quadratic mixture)

Modeling a:
• Modeling D_PLAN

Modeling b:
• Modeling D_PLAN_SI (under-integrated)
This documentation is voluntarily brief.
