Summary:

This test is a test of not-regression. It does not have an analytical solution. The objective is to test a large number of different elementary calculations:
- tally: linear and non-linear thermics (THER_LINEAIRE and THER_NON_LINE)
- very varied loadings (in form "reality" or "function")
- all possible types of meshes (linear/quadratic mixture)

Modeling a:
- Modeling AXIS
This documentation is voluntarily brief.
