

## ZZZZ129 – Validation of order CREA\_RESU keyword factor PROL\_RTZ

---

### Summary:

This test validates the keyword `PROL_RTZ` order `CREA_RESU`. It successively consists in creating:

- a field of temperature on a set of nodes of a grid 1D. This field is then given in the form of a structure of data `table exit` of the order `POST_RELEVE_T`.
- a field on an axisymmetric grid (3D) starting from the field to create previously.

All the values with the nodes of the grid 3D are tested.

This documentation is voluntarily succinte.
