

ZZZZ136 - Validation of POST_RELEVE_T

Summary:

It is about a CAS-test without physical reality. It makes it possible to validate the orders POST_RELEVE_T and MACR_LIGN_COUPE.

Modeling A :

- Validation POST_RELEVE_T and MACR_LIGN_COUPE in 3D
- Operands TRAC_DIR INVARIANT ELEM_PRINCIPAUX
- starting from a way, of a list of nodes
- postprocessing of a tensor, a vector

Modeling B :

- Validation POST_RELEVE_T and MACR_LIGN_COUPE in 2D
- Operands TRAC_DIR TRAC_NOR INVARIANT ELEM_PRINCIPAUX
- starting from a way, of a list of nodes
- postprocessing of a tensor, a vector

Modeling C :

- Validation POST_RELEVE_T in 3D
- Operand EXTRACTION on ways
- postprocessing of a tensor, a vector

Modeling D :

- Validation POST_RELEVE_T in 2D
- EXTRACTION on curved sides
- REFERENCE MARK USER
- AVERAGE TRESCA
- Validation AFFE_CHAR_MECA LIAISON_GROUP 'DNOR'

This documentation is voluntarily brief.
