

ERREU06 - Functional check of Not in Code_Aster

Summary:

This test validates the fact that in version debug on the waiter centralized Aster4, *Code_Aster* stop in error when one tries to handle Not (Not-a-Number) of type SNaN (Signalling Not).

1 Principle of the test

This test is a data-processing test. It validates that it `Not` defines in `envima.c` is well of the type `SNaN` and that, so any handling causes the stop of the execution in “digital Error”. This test is carried out using the keyword `TEST_NAN=' OUI '` order `TEST_RESU`.
