

ZZZZ382 - Validation of CALC_CHAMP on beams with complex fields

Summary:

This test does not have any physical meaning, it is primarily a data-processing test.

In the presence of complex modes on modal basis (`mode_meca_c`), CALC_CHAMP do not authorize calculation. On the other hand if the modal base is restored on physical basis, then CALC_CHAMP accept the complex modes.

The goal of this test is thus to validate CALC_CHAMP on beams in the presence of complex fields.

This documentation is voluntarily brief.
