

## PLEXU13 – Validation of the sending of a dynamic initial state by CALC\_EUROPLEXUS

---

### Summary:

In this purely data-processing test, one checks the sending by CALC\_EUROPLEXUS with Europlexus of a dynamic initial state, i.e. integrating the field speed. For that, one compares the results of a calculation launched in once (reference) with a calculation launched twice. The final Contracting State of first of calculation being the initial state of the second. It is checked whereas the results of the second calculation are identical to the results of the calculation of reference.

This documentation is voluntarily brief.
