

## SSLS27 - Bored or bent thin section

---

### Summary:

The test, taken again guide VPCS, makes it possible to check the behavior of an embedded plane plate subjected at its loose lead with two nodal forces of the same sign (inflection) or of opposite sign (torsion).

The first loading constitutes an extension of the initial test for which a reference solution is given in [bib3].

5 modelings are carried out: DKT, DST, DKQ, DSQ and Q4G.

## 1 Problem of reference

### 1.1 Geometry

Longueur  $L = 12 \text{ m}$   
Largeur  $b = 1 \text{ m}$   
Epaisseur  $t = 0.05 \text{ m}$

Coordinates of the points (in  $m$ ) :

	$A$	$B$	$C$	$D$	$E$
$x$	0.	12.	12.	0.	12.
$y$	-0.5	-0.5	0.5	0.5	0.
$z$	0.	0.	0.	0.	0.

### 1.2 Properties of material

The elastic properties of material considered are the following ones:

Young modulus:  $E = 1.10^{11} \text{ Pa}$

Poisson's ratio:  $\nu = 0.25$

### 1.3 Boundary conditions and loadings

Side  $AD$  embedded:

any point  $P$  such as  $x_P = 0$  ( $u = v = w = 0$   $\theta_x = \theta_y = \theta_z = 0$ )

Loading: 2 loading cases

- 1) in  $B$  and  $C$  : opposite forces parallel with the axis  $Z$   $F_{z_B} = -1 \text{ N}$   $F_{z_C} = +1 \text{ N}$
- 2) in  $B$  and  $C$  : of the same forces directions parallel with the axis  $Z$   $F_{z_B} = +1 \text{ N}$   $F_{z_C} = +1 \text{ N}$

## 2 Reference solution

### 2.1 Method of calculating used for the reference solution

- Opposite forces perpendicular to the plate [bib1], [bib2]

The reference solution is that given in card SSLS27/89 of guide VPCS:

Displacement of the point  $C$  :  $w = 35.37 \cdot 10^{-7} m$

Resultant of the efforts to embedding (  $AD$  ) according to  $DZ$  :  $RESULT_z = 0$

Moment associated with the resultant with the efforts to embedding in the middle of  $AD$  :

$$MOMENT_x = -1$$

$$MOMENT_y = 0$$

- Of the same forces directions perpendicular to the plate [bib3]

The formulation in beam of Euler gives a solution approached for a Poisson's ratio  $\nu$  different.

Displacement of all the nodes on the side  $BC$  :  $w = \frac{F}{6EI_z} 2 L^3$

Resultant of the efforts to embedding (  $AD$  ) according to  $DZ$  :  $RESULT_z = -2$

Moment associated with the resultant with the efforts to embedding in the middle of  $AD$  :

$$MOMENT_x = 0$$

$$MOMENT_y = 24$$

### 2.2 Results of reference

Displacement of the points  $B$ ,  $C$  and  $E$ . Resultant with embedding along  $AD$ , moment with embedding compared to the axes  $X$  and  $Y$  in the middle of  $AD$ .

### 2.3 Uncertainty on the solution

Analytical solution.

## 3 Modeling A

### 3.1 Characteristics of modeling

Cutting: 12 in length 4 in width: 96 meshes TRIA3  
with symmetry by report centers  $Ox$

Twinge transverse  $b/4t = 5$   
longitudinal  $L/12t = 20$

2 loading cases

- 1) Opposite forces
- 2) Of the same forces direction

Name of the nodes:

Not  $A = N1$  Not  $C = N65$  Not  $E = N39$   
Not  $B = N13$  Not  $D = N53$

### 3.2 Characteristics of the grid

Many nodes: 65  
Many meshes and types: 96 TRIA3

### 3.3 Sizes tested and results

Loading case	Not	Size and unit	Reference	Type of reference	Tolerance
1	$B$	displacement $DZ (m)$	$-3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
	$E$	displacement $DZ (m)$	0	'ANALYTICAL'	1.0E-12
	$C$	displacement $DZ (m)$	$3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
2	$B$	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	$E$	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	$C$	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%

## 4 Modeling B

### 4.1 Characteristics of modeling

Cutting: 12 in length 4 in width: 96 meshes TRIA3  
with symmetry by report centers Ox

Twinge transverse  $b/4t=5$   
longitudinal  $L/12t=20$

2 loading cases

- 1) Opposite forces
- 2) Of the same forces direction

Name of the nodes:

Not  $A=N1$  Not  $C=N65$  Not  $E=N39$   
Not  $B=N13$  Not  $D=N53$  Not  $F=N27$

### 4.2 Characteristics of the grid

Many nodes: 65  
Many meshes and types: 96 TRIA3

## 4.3 Sizes tested and results

Loading case	Not	Size and unit	Reference	Type of reference	Tolerance
1	<i>B</i>	displacement <i>DZ</i> (m)	$-3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
	<i>E</i>	displacement <i>DZ</i> (m)	0	'ANALYTICAL'	1.0E-12
	<i>C</i>	displacement <i>DZ</i> (m)	$3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
	<i>AD</i>	Resulting force <i>DZ</i> (N)	0	'ANALYTICAL'	1.0E-8
	<i>F</i>	Moment <i>DRX</i> (N.m)	-1	'ANALYTICAL'	1.0E-6%
	<i>F</i>	Moment <i>DRY</i> (N.m)	0	'ANALYTICAL'	1.0E-8
2	<i>B</i>	displacement <i>DZ</i> (m)	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	<i>E</i>	displacement <i>DZ</i> (m)	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	<i>C</i>	displacement <i>DZ</i> (m)	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	<i>AD</i>	Resulting force <i>DZ</i> (N)	-2	'ANALYTICAL'	1.0E-6%
	<i>F</i>	Moment <i>DRX</i> (N.m)	0	'ANALYTICAL'	1.0E-8
	<i>F</i>	Moment <i>DRY</i> (N.m)	24	'ANALYTICAL'	1.0E-6%

## 5 Modeling C

### 5.1 Characteristics of modeling

Element of hull DKT

Cutting: 12 in length 4 in width: 48 meshes QUAD4  
with symmetry by report centers  $Ox$

Twinge transverse  $b/4t=5$   
longitudinal  $L/12t=20$

2 loading cases

- 1) Opposite forces
- 2) Of the same forces direction

### 5.2 Characteristics of the grid

Many nodes: 65  
Many meshes and types: 48 QUAD4

### 5.3 Sizes tested and results

Loading case	Not	Size and unit	Reference	Type of reference	Tolerance
1	<i>B</i>	displacement $DZ(m)$	$-3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
	<i>E</i>	displacement $DZ(m)$	0	'ANALYTICAL'	1.0E-12
	<i>C</i>	displacement $DZ(m)$	$3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
2	<i>B</i>	displacement $DZ(m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	<i>E</i>	displacement $DZ(m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	<i>C</i>	displacement $DZ(m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%

## 6 Modeling D

### 6.1 Characteristics of modeling

Element of hull DST

Cutting: 12 in length 4 in width: 48 meshes QUAD4  
with symmetry by report centers  $Ox$

Twinge transverse  $b/4t=5$   
longitudinal  $L/12t=20$

2 loading cases

- 1) Opposite forces
- 2) Of the same forces direction

### 6.2 Characteristics of the grid

Many nodes: 65  
Many meshes and types: 48 QUAD4

### 6.3 Sizes tested and results

Loading case	Not	Size and unit	Reference	Type of reference	Tolerance
1	B	displacement $DZ (m)$	$-3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
	E	displacement $DZ (m)$	0	'ANALYTICAL'	1.0E-12
	C	displacement $DZ (m)$	$3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
2	B	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	E	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	C	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%

## 7 Modeling E

### 7.1 Characteristics of modeling

Element of hull Q4G

Cutting: 12 in length 4 in width: 48 meshes QUAD4  
with symmetry by report centers  $Ox$

Twinge transverse  $b/4t=5$   
longitudinal  $L/12t=20$

2 loading cases

- 1) Opposite forces
- 2) Of the same forces direction

### 7.2 Characteristics of the grid

Many nodes: 65  
Many meshes and types: 48 QUAD4

### 7.3 Sizes tested and results

Loading case	Not	Size and unit	Reference	Type of reference	Tolerance
1	<i>B</i>	displacement $DZ (m)$	$- 3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
	<i>E</i>	displacement $DZ (m)$	0	'ANALYTICAL'	1.0E-12
	<i>C</i>	displacement $DZ (m)$	$3,537 \cdot 10^{-6}$	'ANALYTICAL'	0.5%
2	<i>B</i>	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	<i>E</i>	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%
	<i>C</i>	displacement $DZ (m)$	$1.1059 \cdot 10^{-3}$	'ANALYTICAL'	1%

## 8 Summary of the results

---

One finds the analytical results with very a good agreement which modeling takes account of transverse shearing or not.
