
TTNA200 - Linear and non-linear thermics 2D AXIS

Summary:

This test is a test of not-regression. It does not have an analytical solution. The objective is to test a large number of different elementary calculations:

- tally: linear and non-linear thermics (THER_LINEAIRE and THER_NON_LINE)
- very varied loadings (in form "reality" or "function")
- all possible types of meshes (linear/quadratic mixture)

Modeling a:

- Modeling AXIS

This documentation is voluntarily brief.
